SGML Bibliography

SGML Bibliography Update - 1996

A major component of this SGML database is represented by an updated online bibliography for SGML and structured documents. The bibliography provides a core list of references and abstracts for over 1500 books and articles (as of February 15, 1997). It updates the "General SGML bibliographies" cited immediately below, but includes *only* references and abstracts, with a brief index. It does not include software, vendor lists, etc. Our intention is to include anything significant in this bibliographic listing. It is currently being augmented as well as maintained for currency. Please report additions, omissions and corrections to robin@acadcomp.sil.org.

Quick Access to the Bibliography

General SGML bibliographies

An online "general bibliography" for SGML compiled by Robin Cover (with pointers to other SGML resources) is available from several Internet sites, listed below. This general bibliography includes not only bibliographic references, but descriptions of SGML Projects, Software, etc. Some of the address information is dated in this version, but the core bibliographic data is still useful, and is substantially complete for primary SGML print publications in book form. The bibliography is currently being updated and revised. Network sources include:

- Bibliography from the SIL GOPHER (searchable version)
- Bibliography in text format from the SGML Repository
- Bibliography in various formats from the SGML Project, Exeter (in uncompressed, compressed, and .tar file formats)
- Available via standard email from the SGML Project's mailserver (in 5 parts). For part 1, send the command `GET SGML BIBLIOG.P1` on a single line in the body of an email message to `mailbase@mailbase.ac.uk`. Then, in the same or separate email messages (one command per line), send a similar request for the four files BIBLIOG.P2, BIBLIOG.P3, BIBLIOG.P4, BIBLIOG.UPDATE.92.04).
- Available in four parts from the AIBI-L (UOTTAWA) Listserver. Send standard email to listserv@acadvm1.uottawa.ca with the following commands (one per line) in the body of the email message: "get sgml biblio1 aibi-l"; "get sgml biblio2 aibi-l"; "get sgml biblio3 aibi-l"; "get sgml biblio4 aibi-l".
- Also available from the University of Cardiff WWW server
